5 METERS/SECOND

EPS

(Expanded Polystyrene)

HIGH-SPEED IMPACTS

7.75 METERS/SECOND

THE CORE TECHNOLOGIES

PROGRESSIVE LAYERING

A first-of-its kind, three-layer impact liner designed to manage energy from three potential impact scenarios: low, mid and high-speed.

ADAPTIVE FIT

Segmented construction, automatically conforming to a rider's head for a better fit and more predictable energy management.

ROTATIONAL ENERGY MANAGEMENT

A "slip zone" within the impact liner allows for subtle movement between the inner layers and works to reduce rotational energy transfer from angular impacts.

MANAGEMENT

HOW DOES IT WORK?

There are three main components to a MIPS-equipped helmet:

In an impact, the foam liner dissipates force. Additionally, the elastomeric attachment system stretches to allow the foam liner to rotate independently around the low-friction liner and your head.

Although the MIPS system only rotates a few millimeters, that movement may reduce the amount of rotational force that could be transferred to your brain.

MIPS SLIP PLANE

This low-friction slip plane is designed to reduce rotational force during certain impacts.

ELASTOMERIC RETENTION

Four elastomeric bands provide a few millimeters of movement in all directions.

STREET

ProFIT

PURPOSE-BUILT SIZING FOR HIGH-SPEED RACING.

6 SHELLS. UNLIMITED PERFORMANCE.

By offering 6 shell sizes instead of the traditional 2-3, and 6 impact liner sizes, we enable riders to experience the performance of a near-custom fit. *However you ride, fit matters.*

1 EXTRA SMALL	2 SMALL	3 MEDIUM	4 LARGE	5 EXTRA LARGE	6 XXL
53-54 CM	55-56 CM	57-58 CM	59-60 CM	61-62 CM	63-64 CM

PLUS, 6 IMPACT LINER SIZES

We engineered 6 unique impact liners, based on the headforms of each major size, to provide a pro-level fit and helmet.

FOR COMPARISON'S SAKE

The Traditional 2 OR 3-SHELL FIT SYSTEM

While it works for many applications, this more typical offering requires additional padding to compensate for the shell sizing variance.

XS 53-54 CM
S 55-56 CM

MD 57-58 CM
L 59-60 CM

XL 61-62 CM
XXL 63-64 CM

The All New BELL ProFIT SYSTEM

The ProFIT system's 6 shells ensure that riders experience a more proportional fit that's optimized for weight, size, and stability.

XS: 53-54 CM

S: 55-56 CM

M: 57-58 CM

L: 59-60 CM

XL: 61-62 CM

XXL: 63-64 CM

SMALLER. FASTER. PERIOD.

**A MORE COMPACT, PROPORTIONATE FIT
EQUATES TO A LIGHTER AND FASTER HELMET.**

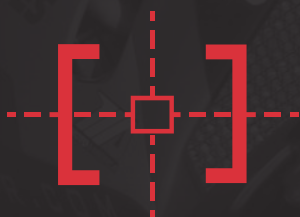

SMALLER PROFILE

This allows riders to achieve a tighter, tucked position with improved aerodynamics

LESS NOISE

A better fitting helmet will quiet wind noise and reduce buffeting.

BETTER STABILITY

Without the added size and material, it's steady on the head and reduce fatigue.

"IT JUST DISAPPEARED ON MY HEAD."

Cameron Beaubier in the Star

Q: I've always worn a medium. According to this, I'm now a large. Can you please explain how this is smaller?

A: That's because you've always based your size on a 3 shell system. The Star Series uses the ProFIT's shell system which has a unique liner for every major size. Overall, the profile will be more proportionate.

Q: When i put the helmet on, it seemed tight. Is that normal?

A: Yes. The performance fit of a ProFIT helmet will be light and snug as it's optimized for size, weight and stability.

LEARN MORE ABOUT THE NEW ProFIT SYSTEM AT BELLHELMETS.COM/STAR-SERIES

RACE STAR FLEX

THE RACER WITH A DAY JOB, THE RACE STAR PROVIDES THE SAME LEVEL OF RIDER PROTECTION IN A MORE AFFORDABLE PACKAGE.

THE FEATURES

FLEX IMPACT LINER

A first-of-its kind, three-layer impact liner designed to manage energy from three potential impact scenarios: low, mid and high-speed

VIRUS® COOL JADE POWER MESH LINER

Designed to withstand the rigors of hard use in extreme conditions, the Virus liner allows athletes to stay cool, keep comfortable and beat the funk

3K CARBON SHELL

The proven 3K carbon fiber on the Race Star gives this helmet the look, performance, and feel of a true race helmet

MAGNEFUSION™ MAGNETIC CHEEK PADS

Allows for easy removal of the pads for washing and enables emergency responders to easily remove the cheekpads first before removing the helmet following an impact.

VIRUS® COOL JADE POWER MESH LINER

TECHNICAL FABRICS DESIGNED FOR ACTION SPORTS

Pro Star and Race Star feature the most technically advanced liner on the market. CoolJade fabric from Virus has been infused with recycled jade to create a natural cooling effect. The ultra-wicking construction combined with CoolJade infused yarn decreases your skin surface temperature up to 10° F – keeping you comfortable, dry and cool.

RACE STAR FLEX

PROGRESSIVE LAYERING *

Pro Star and Race Star feature the Flex impact liner, designed to perform across a range of crash scenarios. It does this by using three different materials at three different densities. As the impact becomes greater, higher density layers are engaged to manage energy.

UNDER THE HOOD

THE STAR. RE-IMAGINED PERFORMANCE FROM START TO FINISH.

REINVENTED FIELD OF VIEW

The Star offers an entirely new viewport creating better vertical and lateral field of view and even greater head-check visibility

FIELD TESTED AND DEVELOPED

Working with professional riders on the track is the best way to understand the challenge and generate solutions quickly

OPTIMIZED AERODYNAMICS

Using our state-of-the-art wind tunnel, we fine-tuned the Star's aerodynamics with advanced riding simulations

MORE SIZES. MORE PERFORMANCE.

Offering 6 EPS and 6 shell sizes allows a more proportional fit and improved performance, especially at high speeds

BROADEN YOUR HORIZON

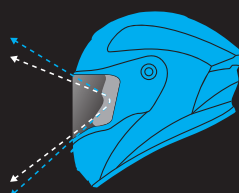

PANOVISION™ VIEWPORT INCREASES FIELD OF VIEW

No matter what or how you ride, one factor remains constant: the need for maximum visibility. Whether racing or going on a simple ride in the mountains, the ability to make safe headchecks and see obstacles clearly is critical.

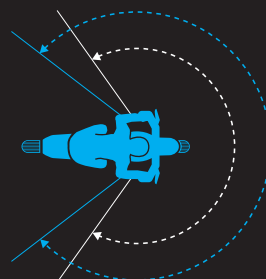

The Panovision viewport in the Star offers riders additional vertical and lateral visibility over the previous Star and more traditional viewports. This allows the rider to see better in a tight or tucked position and make safer lane changes and head-checks.

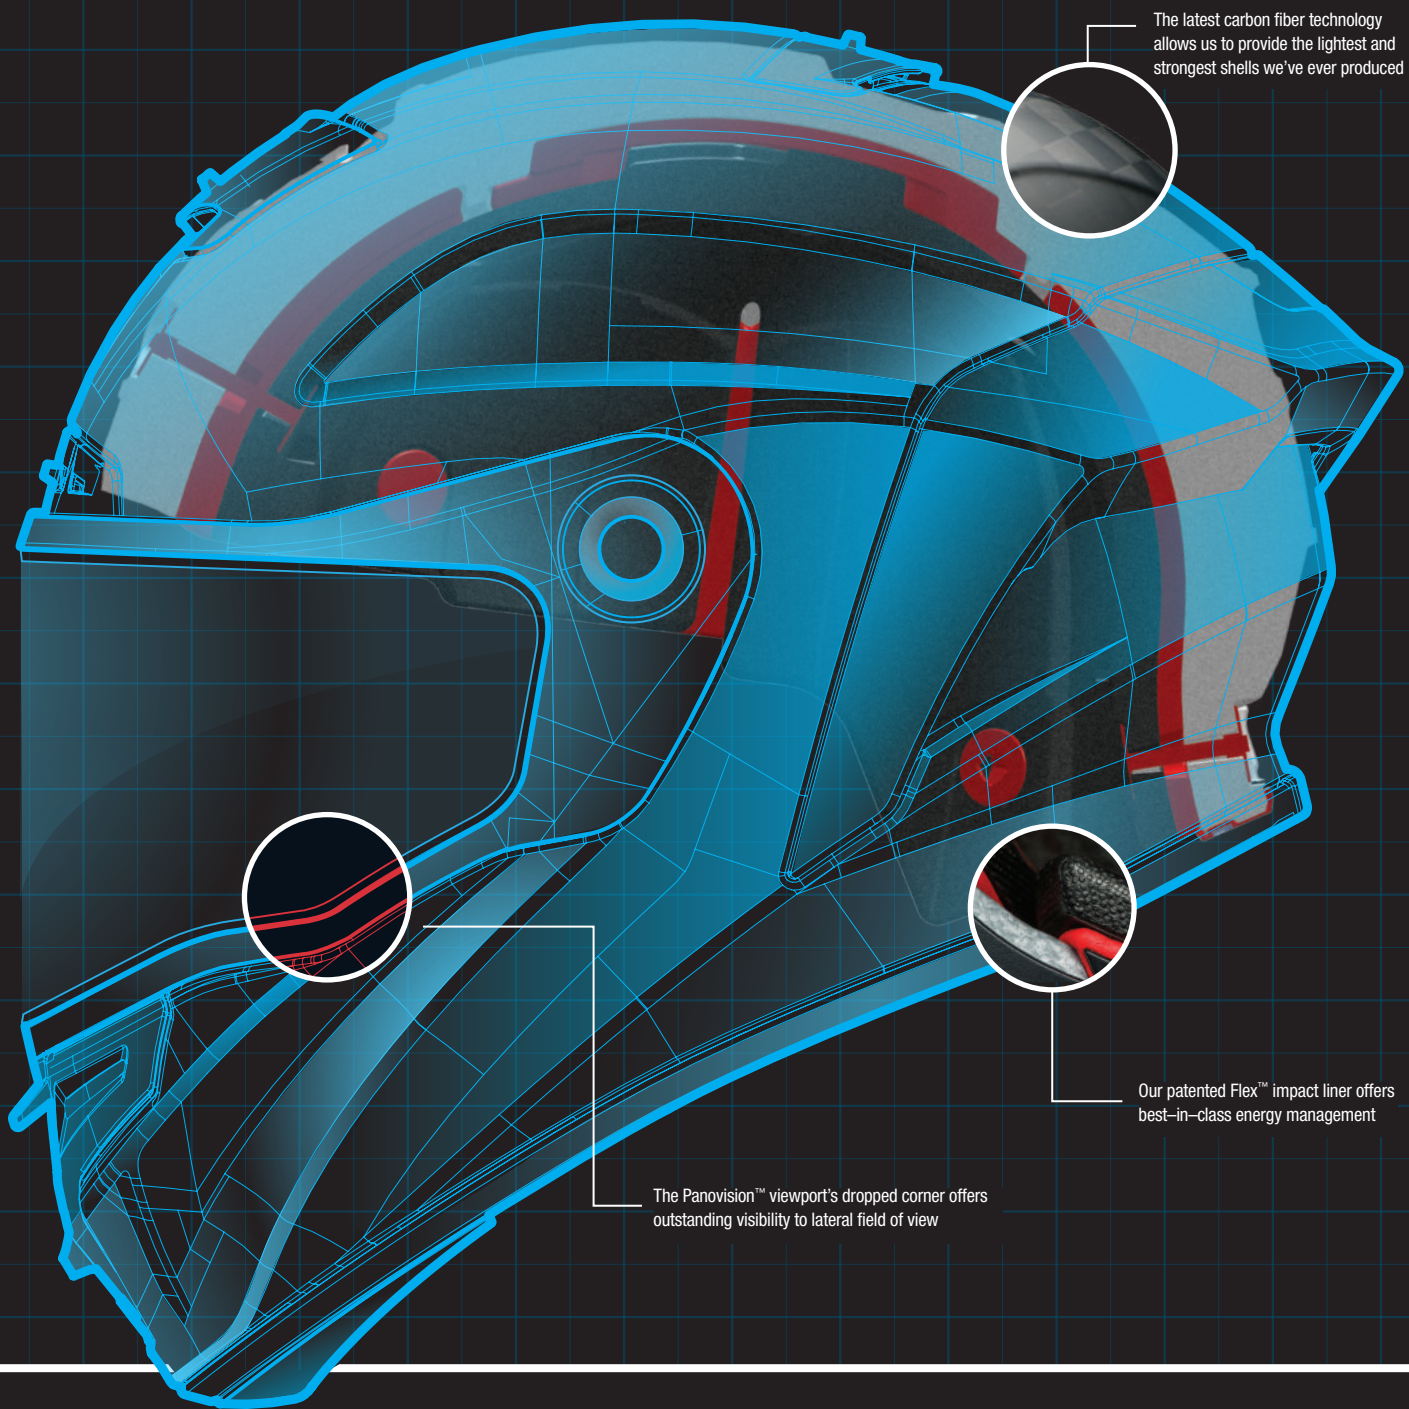

VERTICAL INCREASE IN FIELD OF VIEW

--- TRADITIONAL FIELD OF VIEW
- - - STAR FIELD OF VIEW

LATERAL INCREASE IN FIELD OF VIEW

The latest carbon fiber technology allows us to provide the lightest and strongest shells we've ever produced

Our patented Flex™ impact liner offers best-in-class energy management

The Panovision™ viewport's dropped corner offers outstanding visibility to lateral field of view

PURPOSE BUILT: RACEVIEW VS STREETVIEW

The Star features two unique profile shapes for two distinctly different types of riding. The Raceview profile used on the Pro Star and Race Star uses an orientation specifically optimized for a tucked, more compact position. Conversely, the Streetview profile used for the Star is designed for a more upright, sport or touring position.

RACEVIEW

Requires a higher brow line and chin.

STREETVIEW

Features a dropped brow and different collar profile.

PICK THE RIGHT HELMET FOR YOUR RIDING

The Raceview profile is for a rider that enjoys a tight position and pushing their skills. The Streetview profile is designed for a less aggressive rider.

RACE STAR FLEX DLX

DEDICATED RACER Designed for the racer with a day job—where every race weekend decision has to be carefully considered during the long week—the Race Star Flex DLX is the prime choice. This year, we have re-engineered the champ, shaving its weight by 10% and updating the headform for additional comfort. Race Star Flex DLX features Class 1 optics on its Panovision shield, as well as new speaker pockets and triple-density cheek pads with added comfort lining. From a 3k carbon fiber shell to our proprietary Flex liner for progressive energy management, this helmet is packed with cutting-edge technology to deliver premier performance. The desire to win starts in the head.

STAR NOW WITH MIPS

BUILT FROM THE PRO STAR PEDIGREE, THE STAR DELIVERS PERFORMANCE AT A PRICE POINT THE EVERYDAY RIDER CAN APPRECIATE.

THE FEATURES

TRI-MATRIX COMPOSITE SHELL

A proprietary mix of Aramid, carbon fiber, and fiberglass delivers all the strength of carbon fiber in a more budget-protecting package

X-STATIC® XT2 SILVER LINER

A leader in antimicrobial fabric technology, X-Static material is clinically-proven to provide bacteria and odor protection throughout the life of the liner

EYEWEAR COMPATIBLE

Using prescription glasses or a preferred pair of shades is now possible with eyewear arm pockets woven right into the interior liner

MIPS® MULTI-DIRECTIONAL IMPACT PROTECTION SYSTEM

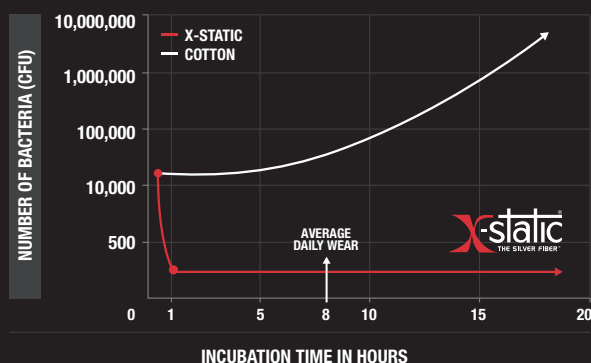

MIPS® is a leading slip-plane technology inside the helmet designed to reduce rotational forces that can result from certain impacts

THE POWER OF SILVER

X-STATIC DELIVERS PERFORMANCE WITHOUT FUNK

X-Static fibers are permanently bonded with a layer of 99.9% pure metallic silver. This silver layer is the key to X-Static's powerful antimicrobial properties, as it creates an ionic shield that permanently inhibits the growth of bacteria and fungi.

Fabrics made with X-Static fibers are flexible, with the natural look and feel of traditional textiles, while offering all the benefits of pure silver.

STAR

A CLOSER LOOK AT THE TRI-MATRIX COMPOSITE SHELL

Woven synthetic fibers have long been proven to be some of the most practical solutions where lightweight strength is required. Our Tri-Matrix shell utilizes the combined power and superior characteristics of these race-proven synthetics, offering unmatched strength and durability.

STAR DLX MIPS

TRACK TESTED Introduced back in 1967, the first full-face helmet on the market, the Bell Star has long represented THE standard in head protection, and it has inspired an industry to pursue the science of head protection. Featuring Class 1 optics on its Panovision shield, the Star DLX MIPS is the continuing evolution of that original ethos, and more. Drawing our inspiration from the essential needs of the modern racer, and loaded with quality features – MIPS® energy management, a Tri-Matrix composite shell, and an X-Static® XT2 silver liner— it's a complete rethinking of what a race helmet should be.

PROTINT™

ACTIVATED BY UV LIGHT:

Enhance your ride with Bell ProTint Shields. Activated by UV light, ProTint shields adapt to changing light conditions, providing enhanced vision during any ride.

ADAPTIVE TECHNOLOGY:

Offering exceptional clarity in low light conditions, ProTint shields quickly darken when exposed to bright sunlight. This adaptive technology helps your eyes adjust to the conditions, even when they are changing as quickly as the road ahead.

UNRIVALED DETAIL:

ProTint Photochromic lenses provide enhanced contrast, helping your eyes to discern shapes and colors more quickly. The result is enhanced clarity and a reduction in eye strain through varying light conditions.

MX-9 ADVENTURE MIPS

ALL-TERRAIN EXPLORER From the roughest singletrack to urban blacktop, the MX-9 Adventure MIPS helps get you there with protection and style. We've taken our MX-9 and added even more capability with an integrated anti-fog, anti-scratch faceshield. The shield flips up and leaves enough room for goggles in extreme conditions, or it can be removed completely. Conversely, the adjustable visor can be removed for a stealth street look. MIPS protection, Velocity Flow ventilation, and a removable, washable, anti-microbial liner round out a highly adaptable package.

BULLITT CARBON

MODERN CLASSIC Offering riders a vintage look with a modern flavor, the Bullitt transcends many categories of motorcycling. Design features like the large eye port keep the wearer feeling less confined while still offering full face protection. Steel mesh vents on the forehead—inspired by the “snaps” that would have been found on helmets from the 70s—are actually functional airways that draw cool air over the rider’s head and exit out of the low-profile exhaust in the rear. A low-profile carbon composite shell and genuine leather interior, combined with the seemingly endless shield options solidify this as a wearable, protective work of art. A true Bell Original, modern classic.

MOTO-3

NOT RETRO. ORIGINAL. The iconic legend has returned! When the original Moto-3 was created back in the late 70's it was a product ahead of its time. Quickly becoming the industry standard in performance and style, today's Moto-3 is everything it was style-wise, with the added benefits of modern safety and production advancements. From the fiberglass composite shell to the EPS-lined chin bar, we left no detail unpolished. The solid colors use the original style terrycloth liner while the colab artist series graphics feature a plush micro suede liner. Both are removeable and washable.

SCOUT AIR

FLYWEIGHT LOOKS, HEAVYWEIGHT PROTECTION The Scout Air utilizes an advanced and innovative "In-mold" construction that combines the Tri-Matrix composite shell with the internal EPS liner. The final result is an extremely compact, lightweight helmet that surpasses both DOT and European ECE certification requirements. The ultimate lightweight protection - in spite of the robust performance—it weighs a feathery 900 grams; so light it almost disappears on your head. Snap in either of the two included visors and tailor the look to suite your style, or pick up one of the clear or smoked "full-face" accessory shields and escape from the elements.

MOTO-9 FLEX

PROGRESSIVE PROTECTION Ever since the first Bell helmet, our ongoing mission has been to innovate and improve the science of protection, always striving to bring technologies to the table that set the benchmark for impact and energy management. Meet the Moto-9 Flex – evolution of the fittest. A first-of-its-kind, three-layer impact liner utilizes multiple densities of material to more comprehensively disperse impact energy and works to reduce rotational energy transfer. Moto-9's flexible, segmented liner achieves an adaptive, more personalized fit for a wider variety of head shapes, and allows us to deliver superior ventilation throughout the helmet. The Moto-9 Flex is the most advanced helmet we have ever made, and is helping set the standard for rider protection in motocross and off-road racing.

■ Off-road helmets

MOTO-9 FLEX

THE CORE TECHNOLOGIES

EXPERIENCE IS THE DIFFERENCE

To evolve the Moto-9's fit, Bell drew inspiration from Bell Bike's segmented liner to create an all new, moto-ready, flexible liner that adapts to different head proportions. The result is a better fitting, more ventilated helmet.

PROGRESSIVE LAYERING

PROGRESSIVE LAYERING
A first-of-its kind, three-layer impact liner designed to manage energy from three potential impact scenarios: low, mid and high-speed.

ADAPTIVE FIT

Segmented construction, automatically conforming to a rider's head for a better fit and more predictable energy management.

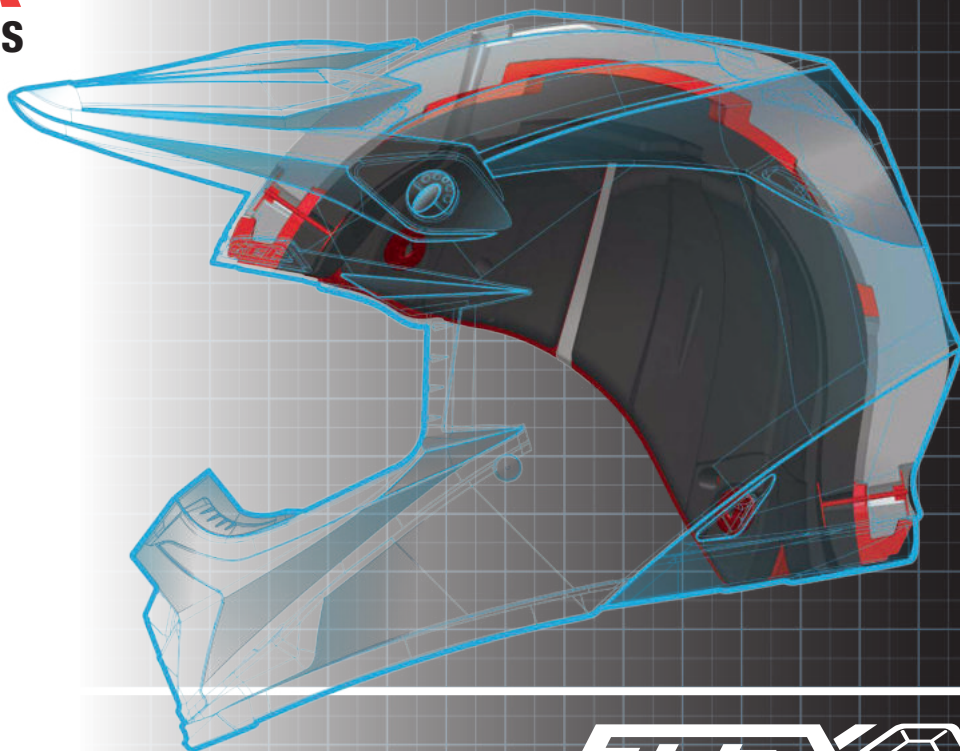

ROTATIONAL ENERGY MANAGEMENT

The "slip zone" helps to reduce the transfer of rotational energy to the rider's head.
See more below

VENTILATION

VENTILATION
With the new segmented and flexible liner in the Moto-9 Flex, Bell managed to add to the proven velocity Flow Ventilation system to make an even cooler helmet.

HOW IT ALL WORKS

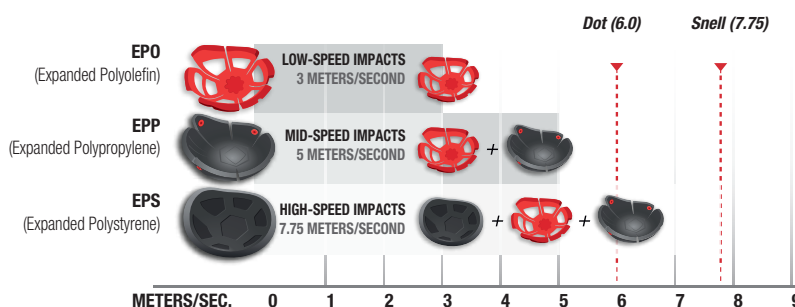

3 Layers, each with their own job.

EPO: THE SOFTER SIDE OF HEAD PROTECTION

Designing a progressive, layered impact liner requires a special material for managing low speed impacts.

Unlike EPP or EPS, Expanded Polyolen or "EPO" is a soft and flexible low-density polymer that works incredibly well to dampen low-threshold impacts. Combining these 3 unique materials at varying densities creates an energy management system that excels in various speed impacts.

PREPARING RIDERS FOR THE REAL WORLD

The progressive layering in the Moto-9 Flex uses a specific material at a particular density to manage the force of the impact. As the impact becomes greater, higher density layers are engaged to manage energy.

DOT **CE**

ROTATIONAL ENERGY MANAGEMENT

A "slip zone" within the impact liner allows for subtle movement between the inner layers and works to reduce rotational energy transfer from angular impacts.

COMPREHENSIVE PROTECTION *WITH* **MIPS**

MIPS SLIP PLANE

This low-friction slip plane is designed to reduce rotational force during certain impacts by allowing movement in all directions.

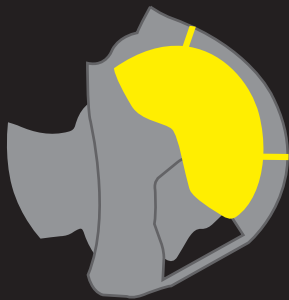

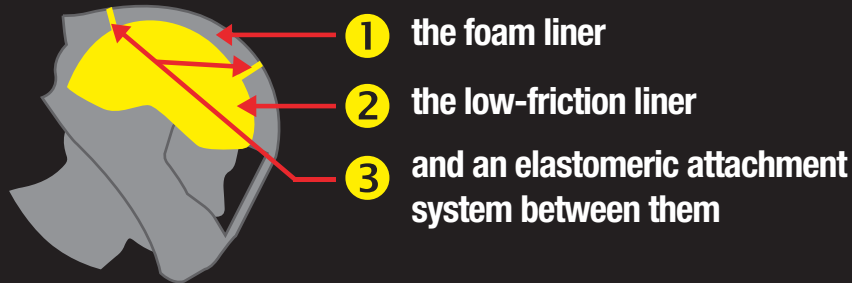

ELASTOMETRIC RETENTION

Four elastomeric bands interact with the slip plane to ensure the slip plane is in correct position before an impact.

HOW DOES IT WORK?

There are three main components to a MIPS-equipped helmet:

In an impact, the foam liner dissipates force. Additionally, the elastomeric attachment system stretches to allow the foam liner to rotate independently around the low-friction liner and your head.

Although the MIPS system only rotates a few millimeters, that movement may reduce the amount of rotational force that could be transferred to your brain.

WHAT IS MIPS?

MIPS is a leading slip plane technology inside the helmet designed to reduce rotational forces that can result from certain impacts.

WHY IS IT IMPORTANT?

We believe that helmets equipped with MIPS technology can provide an additional measure of protection in certain impacts.

MOTO-9 YOUTH

THE NEXT GEN With the next generation of boundary breakers in mind, we've developed our first dedicated youth off-road helmet—moms and dads rejoice! The Moto-9 Youth MIPS offers full-grown protection in a youth-sized package. Sharing the same DNA as the adult version, the Moto-9 Youth MIPS uses a lightweight Tri-Matrix shell and MIPS for additional rotational energy management to enhance your grom's head protection. With growth spurts in mind, the interior padding is removable, washable, and designed to adjust between two sizes to comfortably fit your kid's head as they grow. 10 vents and 3 brow ports ensure they stay cool whether they're putting in laps at the local track or in your backyard. Our goal is to help protect your young rider so you can breathe easy as they explore their limits, no matter the ride.

MX-9 MIPS

MOTOCROSS HERO The off-road world is a dirty, tough place. Chunks of rock and dirt mean business when launched by roosting tires, and even when it's muddy, hitting the ground is always hard. That's why we sweated the details on the MX-9, loading it with a tough polycarbonate shell, MIPS energy management system, an adjustable visor, Velocity Flow ventilation, and a removable, washable, anti-microbial liner for when the time comes to hose down. The MX-9 MIPS packs all these features into one helmet, delivering exceptional value and pro-caliber performance.
